

# Lazy Susan

## You will need:

Shamrock Wooden Lazy Susan  
Craftsmart Liquid Gloss (2x125ml)  
Craftsmart Glaze Paste  
Acrylic Paint or Design Master Spray Paint  
Paper cut outs  
Butane Torch

## Instructions

1. Check the lazy susan is dust free.
2. Paint the lazy susan with the colour of your choice 2 coats should be sufficient. Allow to dry.
3. Using Craftsmart Glaze Paste adhere your cut outs on to the lazy susan. Allow to dry.
4. Using a clean brush, paint a coating of the Craftsmart Glaze Paste over the surface of the lazy susan – this will seal the surface and prepare it for the application of Glass Coat.
5. Elevate your lazy susan and lay plastic underneath to catch any drips.
6. Measure precisely one part resin (red cap) and one part hardener (black cap) in a disposable styrene cup. You do not need to use a measuring vessel, simply compare levels in the transparent bottles for accuracy, allow a few seconds for the contents to settle as the hardener is a little thicker than the resin.
7. Blend thoroughly together with a broad flat stirrer for several minutes.
8. Flood the surface of the lazy susan immediately, use a brush or spreader to help move the Glass Coat across the surface.
9. Bubbles may appear after the pour, we recommend you use a propane torch, sweeping lightly over the surface to remove the bubbles, take care not to scorch the surface.
10. The glossed surface will be torch dry in 24 hours. Allow at least three weeks curing time before putting anything hot on the surface of the lazy susan.
